

T44 - AI Evidence Transcript

Competitor Price Intelligence | ChatGPT-assisted development log

Evidence note: This document records the actual prompts used in the project chat and the resulting iteration decisions. It is reconstructed from the project conversation and is not a UI screenshot. The completed workbook AI Use Log points to these numbered entries.

Entry 01

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	How to download this full workbook all things all tabs
Output assessment	Explained that downloading as .xlsx preserves all workbook tabs, unlike CSV.
What changed next	Downloaded the full workbook so the Task Brief, Price Tracker and AI Use Log remained together.
Decision	Kept

Entry 02

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	See my tasks and help me with it
Output assessment	Identified T44, the objectives, deliverables and evaluation logic from the workbook.
What changed next	Uploaded the assigned T44 workbook so the analysis could use the actual dataset.
Decision	Kept

Entry 03

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	See
Output assessment	Analysed the attached T44 dataset and produced an initial workbook-oriented solution.
What changed next	Recognised that a static workbook might be weaker for the working-build criterion, so the approach was challenged and revised.
Decision	Partly kept

Entry 04

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	Bro we have to code also wtf ??
Output assessment	Clarified that coding was not explicitly required, but a Streamlit working build would provide stronger evidence for the rubric.
What changed next	Requested a coded application instead of relying only on a static workbook.
Decision	Kept

Entry 05

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	Yes do it now
Output assessment	Generated the first Streamlit implementation using the real T44 dataset and deterministic price-gap calculations.
What changed next	Ran the app locally and moved to testing/debugging rather than accepting the first build unchanged.
Decision	Kept

Entry 06

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	What to do now that i opeened it in vs code
Output assessment	Provided the exact VS Code terminal workflow and explained that app.py should be launched through Streamlit.
What changed next	Installed the required packages and launched the application locally.
Decision	Kept

Entry 07

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	It worked but this came at end
Output assessment	Diagnosed the missing xlswriter dependency from the error and explained why the app failed only at export.
What changed next	Installed xlswriter and made sure the dependency was included for the final project.
Decision	Kept

Entry 08

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	See this video what improvement we can do here
Output assessment	Reviewed the V1 app and identified business-communication weaknesses: too much table-first output, weak action emphasis and insufficient visual signalling.
What changed next	Requested a second iteration with executive KPIs, an Action Centre, threshold guides, AI workflow and stronger verification.
Decision	Kept

Entry 09

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	so give me updated best code include everything
Output assessment	Produced the V2 Streamlit build with executive dashboard, latest-week KPIs, risk/opportunity analysis, verification and improved export.
What changed next	Tested V2 locally instead of treating generated code as final.
Decision	Kept

Entry 10

Date	2026-10-01
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	Updated Command
Output assessment	Adjusted the launch command to the actual D:\AI Project 2\T44_Streamlit_Project_V2 location.
What changed next	Used the corrected command and confirmed the app launched at localhost:8501.
Decision	Kept

Entry 11

Date	2026-10-04
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	So i need to upload it o github should i check it once
Output assessment	Recommended final QA before GitHub: app run, filters, tabs, export, refresh and unit test.
What changed next	Ran test_core.py and checked the UI before considering the repository ready.
Decision	Kept

Entry 12

Date	2026-10-04
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	should i test this ouput came
Output assessment	Reviewed the rendered dashboard output and identified what was correct plus interpretation/print-layout cautions.
What changed next	Ran the formal test script rather than relying only on visual inspection.
Decision	Kept

Entry 13

Date	2026-10-04
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	all good but it is using my excel sheet or not cause we have an upload option
Output assessment	Verified the fallback logic: the bundled T44 workbook is used when no file is uploaded, while the upload control acts as an override.
What changed next	Kept the upload feature because it makes the tool reusable without changing the assigned default dataset.
Decision	Kept

Entry 14

Date	2026-10-04
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	So i can upload this?
Output assessment	Reviewed the project ZIP and identified cleanup issues including __pycache__ and a machine-specific path in README.
What changed next	Cleaned the package, added .gitignore and prepared a GitHub-ready structure.
Decision	Kept

Entry 15

Date	2026-10-04
Tool / model	ChatGPT / GPT-5.6 Sol
Exact prompt	but we need some more files written in instruction right like reprt AI prompt used etc?
Output assessment	Re-read the actual Task Brief and confirmed the four required submission items, including the minimum-15-entry AI Use Log and 3-5 page report.
What changed next	Expanded the deliverable from code-only to a complete submission package with final workbook, report, AI evidence and demo material.
Decision	Kept
